

Just like putters, people buy a wedge for 3 main reasons:

- It looks great
- It feels great
- It performs great

RAC wedges are available in the **classic shapes** that are proven winners at retail and on Tour. The mirror-chrome finish offers the finest in look and aesthetic appeal.

RAC wedges provide the **best feel** of any wedge in the marketplace

Feel is a result of how energy is transferred away from the impact area to the head, not from the type of material the head is made of. Shape is far more important than material in determining feel. Unpleasant feel is a result of unmanaged vibration.

RAC technology delivers optimal feel by channeling energy away from the impact area

through 2 “feel pockets” strategically shaped and positioned in the back of the head. The precise positioning and depth of each pocket is what allows each wedge to be “tuned” to provide the ultimate in feel.

RAC wedges **perform better** than other wedges in the marketplace

Inconsistent distance control is a major problem with other wedges.

RAC wedges have a milled face and precision milled Dual-Draft grooves, which provide maximum, consistent spin. They reduce the distance inconsistencies common in other leading wedges by 50%.

The RAC manufacturing process along with exacting manufacturing tolerances ensure that each club is consistent – groove-to-groove, and club-to-club.
