

NEXT GENERATION STRAIGHT DISTANCE

With our new RIBCOR technology, the M4 unlocks a new level of consistency and accuracy in a product designed to be the longest in our irons lineup. Combined with our thinnest face (1.5mm), our ultra-thin leading edge, and our thin-walled Speed Pocket, M4 iron produces golf shots that are not only long, but incredibly straight.

TOMO BYSTEDT | SENIOR DIRECTOR | PRODUCT CREATION

RIBCOR

- RIBCOR localizes face flexibility in the hitting area, transferring more energy to the ball to increase distance and accuracy
- RIBCOR stiffens the perimeter of the head creating a more rigid structure, enhancing sound and feel
- RIBCOR mitigates toe flexibility for tighter dispersion

MORE FORGIVENESS

- Optimized heel and toe weighting provides a significant increase in MOI vs. M2 '17, resulting in more forgiveness
- Ultra-thin leading edge works in conjunction with the Speed Pocket to increase speed on low-face shots

MORE DISTANCE

- Fluted Hosel and 360° undercut allows for redistribution of mass low in the head to increase launch distance, and consistency

AFTERMARKET SHAFTS

- KBS MAX 85 and Fujikura Atmos Red shafts are designed to deliver high launch and maximum ball speed

Optimized heel and toe weighting
