

## MORE SPEED IN THE MOST COMPLETE TOUR BALL

### 5 LAYERS. UNMATCHED TOUR DESIGN.

#### FLIGHT

##### Tri-fast core

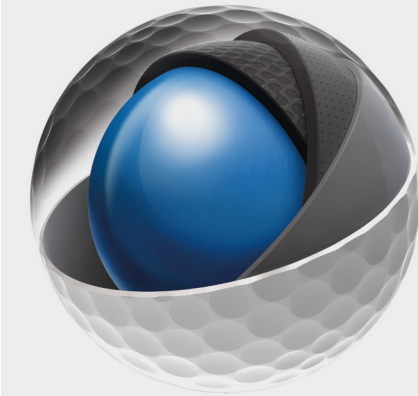

XL low compression core increases launch angle and reduces drag

#### VELOCITY

##### NEW SPEED LAYER SYSTEM WITH HFX

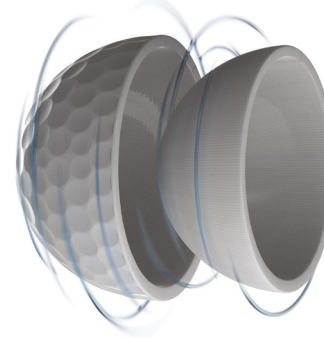

4 Increasingly stiff layers for higher ball speed through greater rebound

#### CONTROL

##### Dual-Spin Cover

Softer cast urethane cover increases groove interaction for more greenside spin

#### WHAT IS HFX?

HFX is a new higher modulus material that improves energy transfer through the ball for more speed

#### HOW DOES IT WORK?

HFX acts like a stiff spring that builds up energy when compressed and rebounds quickly generating more ball speed

HFX adds additional load onto the driver face producing more rebound and speed

#### ADDITIONAL TECH

322 Seamless dimple pattern

NEW Soft-tough Cover – Improved Urethane compound and paint formulation for added cover durability
